CRYPTAD Selectivity Screen — 56 final hits vs. 4 off-target/canonical receptors
ΔΔG = off-target Vina − cryptic-site Vina (Vina uncertainty ±1–2 kcal/mol; BACE-1/AChE selectivity requires MM-GBSA confirmation)

Selectivity Assessment — ΔΔG per off-target receptor (Vina vs Vina)
Green (≥2 kcal/mol) = selective for cryptic site; Red (<2) = borderline/not selective at Vina level

	BIN1 SH3 c-Myc binding groove	PICALM ANTH ubiquitin-binding site	BACE-1 aspartyl protease active site	AChE catalytic gorge
